

for the Amiga

A Game of Global Strategy

Player's Manual

Workbench 1.3 and later • any Amiga from the A500 • FujiNet NIO

Welcome, Commander

Cartarchy is a game of world conquest. Up to six commanders share a map of 42 territories on six continents. Each turn you raise armies, attack your neighbours with the dice, and move your forces up to the front. The last commander standing rules the world.

The Amiga edition plays two ways:

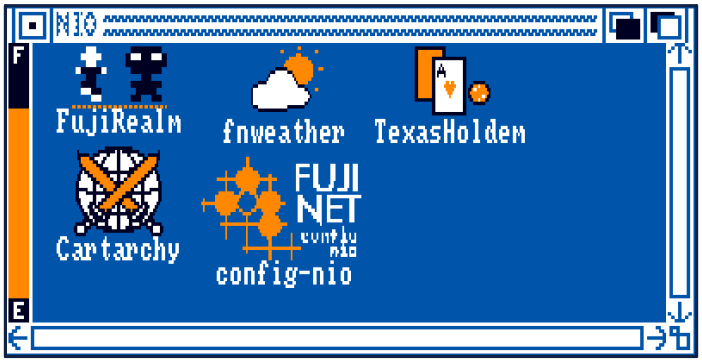

- **Campaign against the computer**: you against one to five computer commanders, with no network needed beyond the FujiNet that starts the game.
- **Online on a Cartarchy server**: turn-by-turn games against friends on other Amigas, iPhones and Android phones, all on the same board and rules.

What you need

Item	Notes
An Amiga	Any model from the A500 (68000) up, Kickstart and Workbench 1.3 or later. 1 MB of memory (512 KB chip RAM plus 512 KB more) is plenty.
A FujiNet	Running the FujiNet NIO firmware, connected to the Amiga and to your network.
fujinet-nio.device	The FujiNet driver, in `DEVS:`, on the `NIO:` drive, or beside the game.
For online play	The address of a Cartarchy server, e.g. `https://cartarchy.diller.org`, and its pairing code.

Installing and starting

Copy **Cartarchy** and its icon **Cartarchy.info** to any disk or drawer. The game is also on the *DILLER Games 1* floppy and on the FujiNet `NIO:` drive. Double-click the globe-and-swords icon to start. From a Shell, type `Cartarchy`. The game finds and loads `fujinet-nio.device` itself if it is not already running.

Cartarchy on the NIO: drive in Workbench 1.3

The Main Menu

The title screen shows a living world: empires spread across the map behind the menu. The panel on the right shows the server you are paired with and your commander name. The status line at the bottom tells you whether the FujiNet answered.

The main menu

Button	Key	What it does
PLAY ON THE SERVER	S	Lists your online games and open lobbies (pair first).
CAMPAIGN VS COMPUTER	C	Starts a game against computer commanders.
PAIR WITH A SERVER	P	Sets the server, pairs this Amiga with it, and renames you.
QUIT	Q	Back to Workbench.

PLAYING ONLINE

PAIRING WITH A SERVER

Before your first online game, pair this Amiga with a Cartarchy server. You only need to do this once: the FujiNet remembers the server and your sign-in, even after a reboot.

- Choose **PAIR WITH A SERVER**.
- Type the server address in **SERVER ADDRESS**. Press Ctrl-X to clear a field.
- Type the **PAIRING CODE**. It is shown on the server's web page, and the server's operator can tell you.
- Click **PAIR**. The server welcomes you under a commander name of its choosing, such as Artemis or Juno.
- To pick your own name, type it in **COMMANDER NAME** and click **RENAME**.

Pairing: the server address and its pairing code, typed in

Tip: Tab moves between fields and Return goes to the next one. The name you choose is the one other players see, on every device.

SERVER GAMES

PLAY ON THE SERVER lists your games and every open lobby. Columns show the game's name, the seats taken, and whose turn it is. **YOURS!** means the server is waiting for you. The list refreshes itself every 20 seconds, or click **REFRESH**.

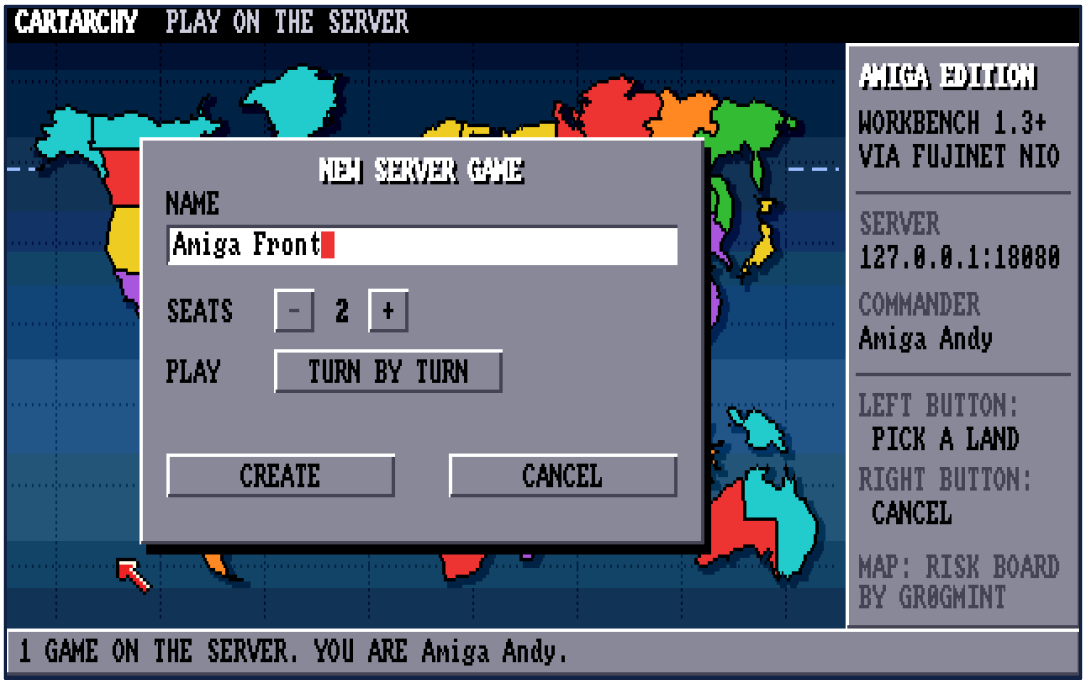

The games list: a lobby waiting to start, and a game on your turn

Row button	Meaning
PLAY / RESUME	Open a game you are in. RESUME means it is already under way.
JOIN	Take a seat in an open lobby.
START	You made this lobby and at least two seats are filled: start the game now. A lobby also starts by itself when every seat is taken.
WAITING	Your lobby still needs more players.
VIEW	Look at a finished game.

STARTING AND JOINING GAMES

NEW GAME creates a lobby. Give it a name, choose 2 to 6 seats, and choose how turns work. **TURN BY TURN** lets only the commander whose turn it is move. **ANY TIME** is the server's real-time mode. When the lobby is made, the status line shows its **join code**, e.g. `B86D3F1F`. Send it to your friends.

A new three-seat game

To join a friend's game, click **JOIN CODE** and type the code they sent you. Lobbies also appear in everyone's list with a JOIN button.

WHILE YOU WAIT

When it's another commander's turn, the status line reads **WAITING FOR** their name. The Amiga checks the server every few seconds and shows each move as it lands. A chime sounds when it's your turn again. You can leave with **GAMES** at any time and come back later: the server keeps the game.

> **About speed:** every move sends the whole game, about 5 KB, so a move takes a few seconds at the FujiNet's standard 19200 baud. Clicks made close together on your turn are sent as one. If your FujiNet and Amiga are happy at a higher speed, set it with `fujinet-nio-baud`.

Campaign Against the Computer

Choose how many computer commanders to face (1 to 5), and click each one's button to set its temperament:

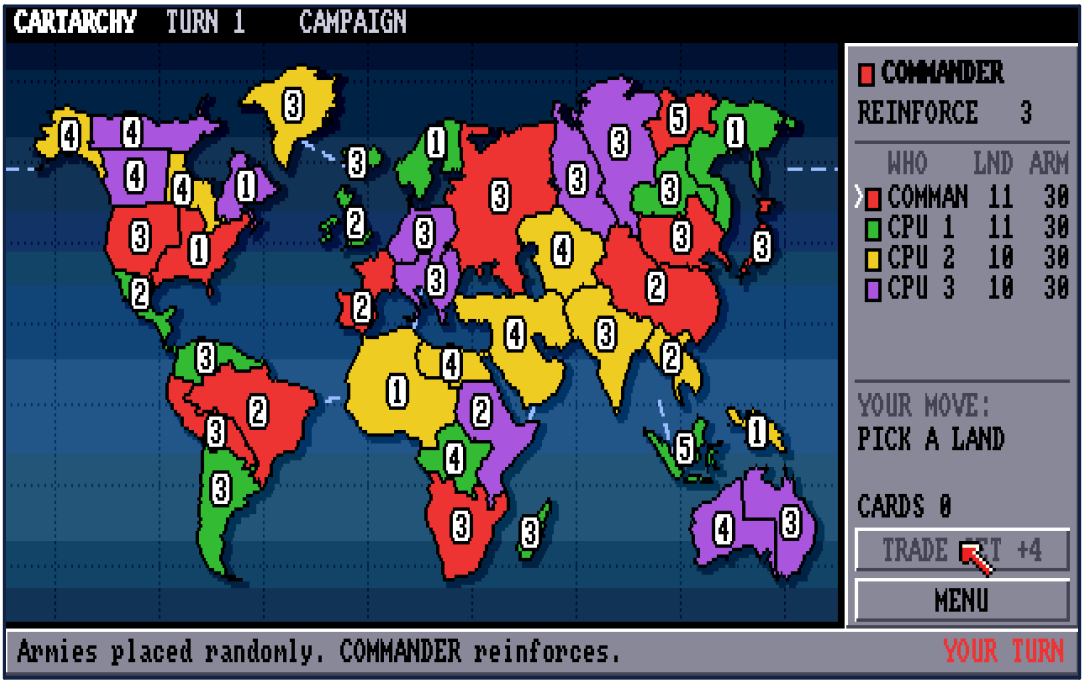

- **CAUTIOUS** attacks only with an advantage of three armies or more.
- **BALANCED** and **AGGRESSIVE** attack whenever they have more armies than the land they attack.

Setting up a campaign against three computer commanders

You are always the red commander and move first. The computers move by themselves, and you can watch every claim, attack and capture.

The Game Screen

A game in progress

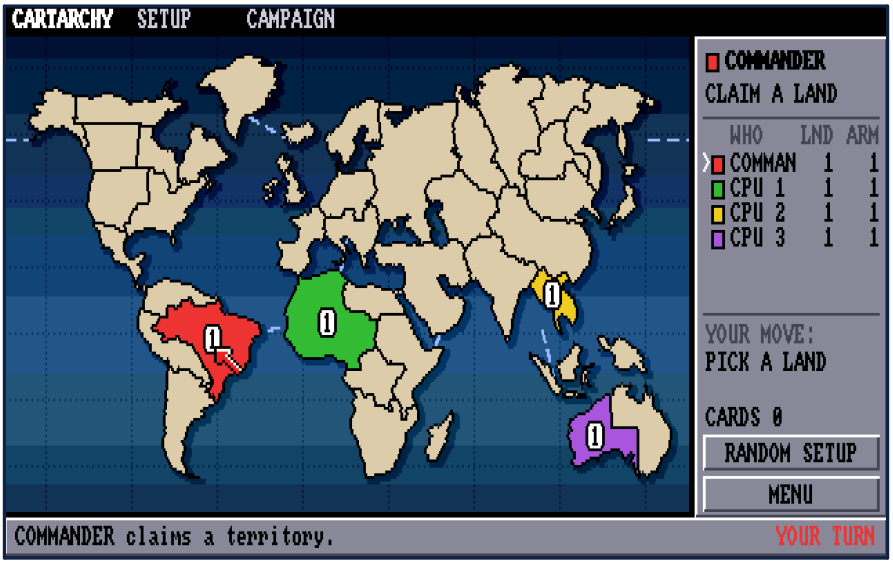

Area	What it shows
Top bar	The turn number, or SETUP, and the game's name (or CAMPAIGN).
The map	Each land is filled with its owner's colour, with a badge showing its armies. Dashed lines are sea routes. Alaska and Kamchatka are neighbours across the edge of the map.
Side panel, top	Whose turn it is, and the phase: CLAIM A LAND, PLACE ARMY, REINFORCE (with the armies left to place), ATTACK or FORTIFY.
Commander list	Each commander's colour, name, lands (LND) and armies (ARM). The commander to move is in white; knocked-out commanders show OUT.
Land details	Point at a land to see its name, its continent and bonus, its owner and armies.
CARDS	How many cards you hold. SET! means you can trade a set.
Buttons	The phase's action (RANDOM SETUP, TRADE SET, END ATTACKS or END TURN), then GAMES or MENU, and RESIGN in online games.
Status line	What just happened, the last dice roll, and YOUR TURN or who you are waiting for.

How to Play

1. Setting up the world

In turn, each commander claims one empty land (**CLAIM A LAND**) until all 42 are taken. Then you take turns placing your remaining armies one at a time on lands you own (**PLACE ARMY**). Starting armies depend on the number of players: 40 each for two, 35 for three, 30 for four, 25 for five and 20 for six.

In a hurry? **RANDOM SETUP**, on your turn during setup, deals every land and army at random and starts the first turn straight away.

Claiming lands: three computer commanders have answered your first claim

2. Reinforce

Each turn starts with new armies: your lands divided by three (at least 3), plus a bonus for each continent you hold completely. Click your lands to place them one at a time.

Continent	Lands	Bonus
Asia	12	+7
North America	9	+5
Europe	7	+5
Africa	6	+3
South America	4	+2
Australia	4	+2

CARDS

If you capture at least one land during your turn, you draw a card when the turn ends. Each card shows a land and a unit (infantry, cavalry or artillery), and two are wild. During reinforcement, **TRADE SET** turns three cards into extra armies. A set is three of one unit, one of each unit, or any set with a wild card.

- Sets are worth 4, 6, 8, 10, 12 and 15 armies, then 5 more for each later trade, counted across all commanders.
- If a traded card shows a land you own, that land gets 2 extra armies.
- Holding five cards, you must trade before placing armies.

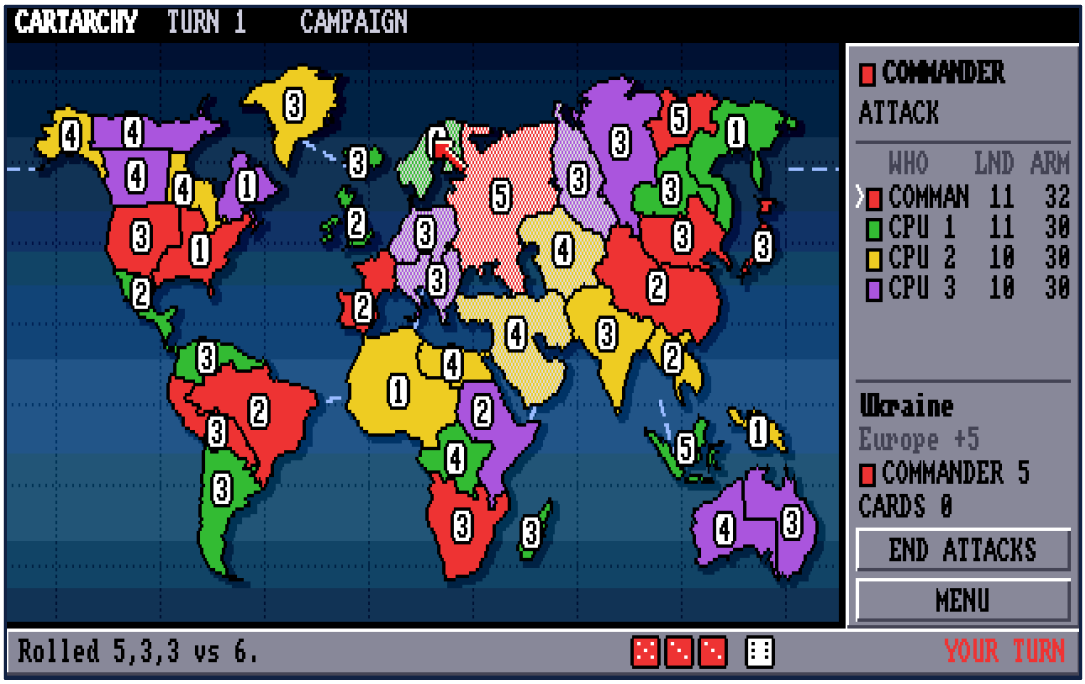

3. ATTACK

Click one of your lands with at least two armies. It shows in white check, and every land it can attack pulses. Click an enemy neighbour to roll the dice. Click it again to attack again. Right-click or Esc picks a different land.

Ukraine picked: its enemy neighbours pulse, ready to be attacked

Dice	Rule
Attacker	Rolls one die per army beyond the first, up to three (red dice).
Defender	Rolls one die per army, up to two (white dice).
Result	The highest dice are compared, then the next highest. For each pair the higher die wins, and the defender wins ties. Each loss costs one army.
Capture	When the last defender falls, the land is yours. As many armies as the dice you rolled move in, leaving at least one behind.

Three red dice against one: "Rolled 5,3,3 vs 6." The defender's six holds

When you've attacked enough, click **END ATTACKS** (or press E).

4. Fortify

You may now strengthen your front once. Click one of your lands with more than one army, then a neighbouring land of yours: all but one army march over, and your turn ends. Otherwise click **END TURN**.

Winning

A commander who loses their last land is out, and their cards go to the conqueror. The last commander left conquers the world. In an online game you can also **RESIGN**. Click it twice, as it asks **SURE?** first. In a two-player game, resigning hands your opponent the win.

Quick Reference

To do this	Mouse	Keys
Claim, place, reinforce, pick a land, attack, move	Click the land or its badge	
Cancel a pick	Right button	Esc
End attacks / end turn	END ATTACKS / END TURN	E or Space
Trade a card set	TRADE SET +n	T
Deal everything at random (setup)	RANDOM SETUP	R
Back to the games list or menu	GAMES / MENU	G, or Esc with nothing picked
Menu buttons	Click	First letter (S, C, P, Q, N, J...)
Clear a text field		Ctrl-X
Next text field	Click the field	Tab or Return

An online game: your turn to reinforce, after the other commander's turn arrived

Troubleshooting

Message	What to do
NO FUJINET-NIO.DEVICE IN DEVS: OR NIO:	Copy fujinet-nio.device to DEVS: or next to the game. The campaign still works without it.
FUJINET IS NOT ANSWERING	Check that the FujiNet is powered and connected, then start the game again.
NOT PAIRED WITH THIS SERVER: PAIR AGAIN	The server no longer knows this Amiga. Use PAIR WITH A SERVER with its current pairing code.
SERVER: INVALID PAIRING CODE OR DEVICE ID	The pairing code is wrong or has changed. Ask the server's operator.
THE GAME MOVED ON: HERE IS THE LATEST.	Someone else changed the game first. The board now shows the server's copy, so play on from there.
NOT YOUR TURN YET.	Wait for the commander named in the status line.
Moves take several seconds	Normal at 19200 baud. A faster link (fujinet-nio-baud) speeds things up.
Cartarchy needs about 180K of free chip memory.	Close other programs or screens. The game needs about 210 KB of chip RAM.

Credits

Cartarchy was created by Andrew Diller, with editions for iOS, Android and the Amiga, and its own game server. The Amiga edition talks to the server through FujiNet NIO.
